

## **ABSTRACT**

JAN 2 9 2002
JAN 2 9 2007  ABSTRACT  ABSTRACT
A system and method for patent application drafting, issued patent assessment
and technology assessment includes a computer having input devices for at least one user
to enter information relating to components of an invention in a hierarchical and
relational categorization using software that automatically generates a relational,
diagrammatic representation of the patent or technology being assessed that is output in a
format that is viewable and modifiable by the user(s). The user(s) may enter additional,
more detailed information that provides a basis for textual representation of the patent or
technology that is being drafted or assessed; this additional information is associated with
and/or connected to the diagrammatic representation, e.g., via an automatic link or a
hyperlink, that permits the user(s) to switch between views of the diagram and the text-
based detailed description of components of the patent.
